

## Request for Public Comments

**To: Interested Stakeholders**

**From: Renewable Energy Market Manager Team**

**RE: Request for Comments on Proposed Change to Contract Addenda**

**Date: September 19, 2014**

Interested stakeholders are invited to submit comments during a 10-day public comment period on a proposal by the Renewable Energy Market Manager Team to modify its processes for the SREC Registration Program (SRP) dealing with the acceptance of contract addenda to comply with the Chapter 8 rule re-adoption effective June 2012.

N.J.A.C. 14:8-2.4 - Energy that qualifies for an SREC; registration requirement ...

1. The submittal of an initial registration package...shall occur no later than:
  - i. Ten business days after execution of the contract for purchase or installation of the photovoltaic panels to be used in the solar facility;

**Current process (presented at the September 2012 RE Committee meeting):** If re-submittal of the SRP registration is required for a non-compliant or incomplete SRP Registration, the registrant may submit a revised SRP Registration with the executed contract together with an addendum that contains the key elements above except that the total install cost, total system capacity, and equipment summary information are not required since they must be on the original contract.

**Proposed modification (first presented at the April 2014 RE Committee meeting):** The SRP Program will no longer accept an addendum to be submitted to revise a non-compliant or incomplete SRP Registration. A revised executed contract must be submitted with the appropriate dates and signatures together with a new SRP Registration and will be subject to the 10-day rule governing SRP Registration submittals.

Comments regarding the proposed process modification should be submitted to: [publiccomments@njcleanenergy.com](mailto:publiccomments@njcleanenergy.com) by COB on Monday, September 29, 2014 with the subject heading "Proposed Change to Contract Addenda."
